Industrial Process Thermocouples

INTRODUCTION

Durex Industries manufactures a wide selection of industrial process thermocouples to meet the requirements of the most demanding process applications in the world such as steel processing, turbine and diesel engine temperature measurement, and chemical processing. In addition, Durex Industries also manufactures thermocouples that are built for commercial applications such as for foodservice, packaging, and semiconductor processing. These thermocouples are assembled under rigid quality control standards per ANSI specifications. Durex engineering can assist you with custom designed process thermocouples for your application.

Design Features:

- Various connection and mounting styles available
- Extreme high-temperature ranges
- Capable of handling direct immersion into high pressure or corrosive applications
- Utilized in heavy duty industrial applications
- Ideal for limited space requirements

Typical Applications:

- Steel Processing
- Turbine and Diesel Engine
- Temperature Measurement
- Chemical Processing
- Foodservice
- Packaging
- Semiconductor Processing

Industrial Process Thermocouples

THERMOCOUPLE CALIBRATION

Durex offers testing at standard temperatures for determination of initial calibration tolerances for thermocouples. All calibration tests are fully traceable to the National Institute of Standards and Technology (NIST). Calibration is also available for application temperatures other than the standard points in a range from -100°F to 3000°F (-79°C to 1650°C) depending on material. Certificates are supplied for all items calibrated.

Calibration (T/C Type)	Temperatures Available	Applicable Specifications
E, J, K, N, T	32°F to 2300°F (0°C to 1250°C)	ASTM E 207 ASTM E 220
B, R, S	32°F to 3000°F (0°C to 1649°C)	ASTM E 230 ANSI MC 96.1
E, K, N, T	-320°F & -110°F to 23°F (-196°C & -79°C to 0°C)	

Durex manufactures thermocouple assemblies in the following calibrations:

ANSI Letter	Durex Code and Calibration	Calibration Description
Type E	E Chromel P-Constantan®	Standard Limits 32°F to 1652°F (0°C to 900°C) ± 1.7°C or ± 0.5% Tol. Special Limits 32°F to 1652°F (0°C to 900°C) ± 1.0°C or ± 0.4% Tol.
Type J	J Iron - Constantan®	Standard Limits 32°F to 1382°F (0°C to 750°C) ± 2.2°C or ± 0.75% Tol. Special Limits 32°F to 1382°F (0°C to 750°C) ± 1.1°C or ± 0.4% Tol.
Type K	K Chromel P-Alumel®	Standard Limits 32°F to 2282°F (0°C to 1250°C) ± 2.2°C or ± 0.75% Tol. Special Limits 32°F to 2282°F (0°C to 1250°C) ± 1.1°C or ± 0.4% Tol.
Type T	T Copper-Constantan®	Standard Limits 32°F to 662°F (0°C to 350°C) ± 1.0°C or ± 0.75% Tol. Special Limits 32°F to 662°F (0°C to 350°C) ± 0.5°C or ± 0.4% Tol.
Type N	N Nicrosil-NISIL	Standard Limits 32°F to 2282°F (0°C to 1250°C) ± 2.2°C or ± 0.75% Tol. Special Limits 32°F to 2282°F (0°C to 1250°C) ± 1.1°C or ± 0.4% Tol.
Type R	R Pt 13% Rhodium-Platinum	Standard Limits 32°F to 2642°F (0°C to 1450°C) ± 1.5°C or ± 0.25% Tol. Special Limits 32°F to 2642°F (0°C to 1450°C) ± 0.6°C or ± 0.1% Tol.
Type S	S Pt 10% Rhodium-Platinum	Standard Limits 32°F to 2642°F (0°C to 1450°C) ± 1.5°C or ± 0.25% Tol. Special Limits 32°F to 2642°F (0°C to 1450°C) ± 0.6°C or ± 0.1% Tol.
Type B	B Pt 30% Rhodium-Platinum 6% Rhodium	Standard Limits 1598°F to 3092°F (870°C to 1700°C) ± 0.5% Tol.

Industrial Process Thermocouples

JUNCTION TYPES

EXPOSED (E)

Joined and welded wires.
Specified where fast response is required.

GROUNDED (G)

Junction is seal welded integrally to the sheath.
Protects wire from corrosive conditions.

UNGROUNDED (U)

Junction is electrically insulated from seal welded sheath. Design helps prevent stray EMF's.

NECKDOWN (N)

Neckdown provides faster response.
Junction can be single or dual circuit and grounded or ungrounded.

PAD (P)

Pad is designed for welding directly to boiler or process tubes for sensing skin temperatures.

SHEATH DIAMETERS

Sheath Code	T	Y	W	A	B	V	C	D	E	F	H
Sheath Diameter	.020"	.032"	.040"	.062"	.125"	.156"	.188"	.250"	.313"	.375"	.500"

Industrial Process Thermocouples

SPECIFICATIONS

Sheath

Materials: 304 Stainless Steel & Incoloy® 600 are most commonly used. See sheath materials tables on the following pages for the metal types used and their codes. Tolerances: Outside diameter $\pm 0.002''$ of nominal size.

Insulation

High purity magnesium oxide is standard; ultra high purity magnesium oxide and alumina oxide are available.

Formability

Minimum radii: 2X sheath diameter for most thermocouple materials. Consult Durex Industries if special forming is required.

Physical Testing

- Dimensional and visual
- Helium leak
- Radiographic (X-Ray)
- Dye penetration
- Metallurgical per ASTM E-2, E-3, and E-112
- Compaction density per RDT C2-IT

ASTM Testing

Sheathed thermocouple material and sheathed thermocouples are tested using the following specifications:

ASTM E585	Standard specifications for sheathed based-metal thermocouple materials.
ASTM E608	Standard specifications for metal-sheathed base-metal thermocouples.
ASTM E780	Standard method for measuring the insulation resistance of sheathed thermocouple-material at room temperature.
ASTM E839	Standard test methods for sheathed thermocouples and sheathed thermocouple material.

Insulation Resistance

Nominal Sheath Outside Diameter	Applied D.C. Voltage (min.)	Insulation Resistance Meg Ω
.030" Diameter and smaller	50	100
.030" to .059" Diameter	50	500
.062" Diameter and larger	500	1000

Finish

Bright annealed, 32 micro-inch or better.

Configurations

Sheath diameters available from 0.020" to 0.500". Two wire (single circuit) and four wire (double circuit) configurations are standard in most diameters.

Weldability

Thermocouple sheath can be brazed, soldered, or welded without loss of insulation resistance. Welding of special sheath materials by the customer is not recommended.

Electrical Testing

- Calibration per ASTM E-220 traceable to NIST
- Insulation resistance
- Wire resistance (ohms per foot loop)
- Time response per RDT C2-3T
- Thermal cycling per ASTM E-225

Industrial Process Thermocouples

SHEATHED MgO THERMOCOUPLE ASSEMBLY WITH STRIPPED END

The TDC2 Style Thermocouple features an MgO insulated element which is junctioned and terminated with a standard 1" long strip. This style is designed for field replacement or addition of other termination options.

THERMOCOUPLE TECHNICAL DATA - WIRE CODE STANDARDS

Color-codes have been adopted by various national and international standard agencies for identification of thermocouple wire and thermocouple products. In the United States, thermocouple grade wire normally has a brown overall jacket. For Types B, R, and S the color-codes relate to the compensating cable normally used.

Type	United States ANSI 96.1	United Kingdom BS 1843	Germany 43714	France NF C42-323	Japan JIS C1610-1981

Plastics Industry Sensors

INTRODUCTION

Durex offers a complete line of thermocouples that are specifically designed for the plastics processing industry. These thermocouples are typically ANSI type J or K calibration and consist of a flexible thermocouple conductor insulated with fiberglass. Designs utilize factory standard bayonet fittings or threaded fittings that retrofit most plastic processing equipment that is currently on the market. Durex also offers European and Japanese retrofit parts with equivalent color codes for direct replacement in these machines.

Design Features:

- Typical terminations: split leads, spade lugs, or polarized male plugs
- Adjustable to various immersion depths
- Provide fast response times
- Wide variety of sizes and styles
- Custom designs available
- Dependable temperature measurement
- Economical general purpose thermocouples

Typical Applications:

- Extrusion
- Injection Molding
- Blow Molding
- Hot Runner Systems
- Thermoforming
- Custom Die Applications

CODE DEFINITIONS AND TERMINATION TYPES

Thermocouple Type

Thermocouple Type Codes				Limits of Error
E	J	K	T	Standard Limits
2	3	4	8	Special Limits

Sheath Diameter

Code	Diameters
B	.125" or 1/8" O.D.
V	.156" or 5/32" O.D.
C	.188" or 3/16" O.D.
D	.250" or 1/4" O.D.
F	.375" or 3/8" O.D.

Junction Type

Code	Single Junction
G	Grounded
U	Ungrounded

Code Definitions

"L" Dimensions				"B" Dimensions				"A" Dimensions		Fractional Dimension Letter Code			
"L" dimensions are specified in whole inches and a single alpha character which represents a fraction. Enter the three digit code as follows:				"B" dimensions are specified in fractions from 1/8" to 1". Use the single alpha character to indicate the tip length. Enter the code as follows:				"A" dimensions are specified in whole inches only. Enter the three digit code as follows:		1/16"	A	11/16"	L
										1/8"	B	3/4"	M
3"	030	10 5/8"	10K							3/16"	C	13/16"	N
4 1/2"	04H	12"	120	1/8"	B	5/8"	K	9"	009	1/4"	D	7/8"	P
6 1/4"	06D	15 3/8"	15F	1/4"	D	3/4"	M	12"	012	5/16"	E	15/16"	R

										1/2"	H	Fraction	
										9/16"	J		
										5/8"	K		

Termination Type Numbers

ADJUSTABLE DEPTH THERMOCOUPLE WITH SPRING

The TBA10 thermocouple uses a compression spring and bayonet lockcap which allows this design to adjust to hole depths up to 12" deep. This design also features a stainless steel tip with a silver solder junction for fast response. A tig welded junction is available upon request.

ADJUSTABLE DEPTH THERMOCOUPLE WITH ARMOR

The TBA20 thermocouple uses flexible stainless steel armor cable with a rotating bayonet lockcap on the outside diameter that adjusts to various immersion depths. The armor cable assures maximum protection of the thermocouple element for extension from the process.

MELT BOLT THERMOCOUPLE

Durex melt bolts are designed for dependable temperature measurement of the plastic melt stream within extruders and injection molding equipment. Standard assemblies are supplied with mineral insulated sensing elements for extended pressure and temperature performance. Optional thermal barriers of Teflon® (500°F) and Mycalex® (900°F) are available upon request.

ADJUSTABLE MELT BOLT THERMOCOUPLES

TAM1 - Adjustable Tip Melt Bolt

Bolt Tip Cutaway View

Drill Pattern

The standard assembly consists of an 1/8" Outer Diameter MgO insulated type "J" thermocouple in a stainless steel sheath. The body is stainless steel with a 1/2" - 20 UNF-2A thread. A thermal barrier reduces heat transfer from body to thermocouple. Other parts include a packing seal, compression barrel nut, hex adjusting screw, and a polarized quick-disconnect male plug. Standard immersion is adjustable from flush to 1". Standard body lengths are 3", 4", and 6" measured from the beginning of wrench flats to the bolt tip. The adjustable plastic melt thermocouple has a movable probe activated by an inner screw mechanism. The probe can be immersed into or withdrawn from the plastic melt stream while the extruder eliminates thermocouple breakage at start-up and prevents hang-up. The thermocouple is self-cleaning; as it is retracted into the body any film formed on it is scraped off.

GENERAL PURPOSE THERMOCOUPLES

General purpose thermocouples are designed for economical use in a wide variety of applications up to 800°F. Sheath material is 304 stainless steel. Type J (Iron-Constantan) calibration is standard. Other calibrations available upon request.

See tables on page 54

EXTENSION ASSEMBLIES

Standard assemblies are manufactured with fiberglass insulated thermocouple wire and stainless steel armor cable protection. Standard calibration is type "J". Other calibrations and special connections are available upon request.

ADJUSTABLE DEPTH RTDs

Resistance Temperature Detectors (RTDs) are continuing to expand as a temperature sensor for plastic machinery applications. All the standard plastics thermocouple designs are available in RTD configurations. The standard element is 100 ohm Platinum, 0.00385 $\Omega/\Omega/^{\circ}\text{C}$, Class B per IEC 751 and DIN 43760 ($\pm 0.1\%$ at 0°C). All assemblies can be specified as 2, 3, or 4 wire configurations. Please specify requirements.
